### SUMMARY

Software engineer with an industrial automation background who connects factory machines to the software that runs production. Started as an intern in 2019 at AMER, an electric-motor manufacturer. Back then, its plant systems ran on a single vendor-managed system that couldn't keep up with growing demand for new features and reliability. Took the initiative to modernize it, making containers and CI/CD the team's standard. Now technical lead of that platform, from the machines to the automated warehouse.

### EXPERIENCE

#### AMER S.p.A.

Valdagno, Italy

Software Engineer, Industrial IoT

Aug 2021 – Present

Own how machines and production systems share data, from designing the integrations to developing and running them.

- **Made thousands of motors a week traceable for compliance** by connecting over 30 production machines to the MES and WMS: each one gets its order and recipe automatically and sends processing data back, while operator dashboards help spot anomalies (ThingWorx, Kepware/OPC UA, custom Docker apps).
- **Designed a pallet-routing system** for an automated warehouse (600+ pallets a day on 53 conveyors) and the full-stack application around it, which unifies warehouse, robot and MES data, flags known faults automatically, and gives an operator chatbot live access to that data (MCP) for support and maintenance.
- **Introduced a delivery pipeline**: every change is deployed automatically to a test environment and checked before it's promoted to production, for over 50 containers (GitLab CI/CD, Docker, Traefik).
- **Set up monitoring and centralized logs** (Grafana, Prometheus, Loki), later also adopted by the IT and BI teams.

Automation & Digitalization Technician (Internship)

Aug 2019 – Aug 2021

Machine data acquisition and integration.

#### Freelance

Remote

Game Developer (UEFN)

Dec 2023 – Mar 2026

Developed custom game mechanics in Verse for client-commissioned Fortnite projects.

### SKILLS

**Industrial IoT & Integration:** ThingWorx, Kepware, OPC UA, REST, Siemens S7

**DevOps & Cloud:** Docker, GitLab CI/CD, Linux, Traefik, AWS

**Backend:** PostgreSQL, JavaScript, Node.js, Python, InfluxDB

**Observability:** Grafana, Prometheus, Loki

**AI Integration:** Claude Code, MCP

**Frontend:** Vue.js, Figma

### EDUCATION

Higher Technical Diploma, Industrial Production Process Digitalization

2019 – 2021

ITS Academy Meccatronico Veneto · 2-year post-secondary program (EQF level 5) · Final grade 100/100

Technical Diploma, Electronics & Automation

2014 – 2019

ITT G. Chilesotti · Two-time RoboCup Italian national finalist

**Certification:** AWS Certified Solutions Architect – Associate (in progress)

**Languages:** English (professional working proficiency), Italian (native)
