SUMMARY

Software engineer with an industrial automation background who connects factory machines to the software that runs production. Started as an intern in 2019 at AMER, an Italian electric-motor manufacturer. Back then, its plant systems ran on a single vendor-managed server that couldn't keep up with growing demand for new features and reliability. Took the initiative to rebuild that setup from scratch, making containers and CI/CD the team's standard. Now technical lead of the new platform, which connects the plant's machines, test benches and automated warehouse.

EXPERIENCE

AMER S.p.A.

Valdagno, Italy

Software Engineer, Industrial IoT

Aug 2021 – Present

Decide how machines and production systems share data, develop the integrations, and keep them running.

- Made thousands of motors a week traceable for compliance by connecting **over 30 production machines** to the MES and WMS: each one gets its order and recipe automatically and sends processing data back, while operator dashboards help spot anomalies (ThingWorx, Kepware/OPC UA, custom Docker apps).
- Designed a pallet-routing system for an automated warehouse (600+ pallets a day on 53 conveyors) and the full-stack application around it, which combines data from **about 10 systems** in real time, flags known faults automatically, and gives an operator chatbot access to live plant data (MCP) for support and maintenance.
- Introduced a delivery pipeline: every change is deployed automatically to a test environment and checked before it's promoted to production, across **over 50 containers** (GitLab CI/CD, Docker, Traefik).
- Set up monitoring and centralized logs (Grafana, Prometheus, Loki), later also adopted by the IT and BI teams.

Automation & Digitalization Technician (Internship)

Aug 2019 – Aug 2021

Machine data acquisition and integration.

Freelance

Remote

UEFN Developer

Dec 2023 – Mar 2026

Designed and coded published Fortnite islands in Unreal Editor for Fortnite (Verse), alongside a full-time role.

SKILLS

Industrial IoT & Integration: ThingWorx, Kepware, OPC UA, REST, Siemens S7

DevOps & Cloud: Docker, GitLab CI/CD, Linux, Traefik, AWS

Backend: PostgreSQL, JavaScript, Node.js, Python, InfluxDB

Observability: Grafana, Prometheus, Loki

AI Integration: Claude Code, MCP, YOLO Object Detection, Antigravity

Frontend: Vue.js, Figma

EDUCATION

Higher Technical Diploma, Industrial Production Process Digitalization

2019 – 2021

ITS Academy Meccatronico Veneto · 2-year post-secondary program (EQF level 5) · Final grade 100/100

Technical Diploma, Electronics & Automation

2014 – 2019

ITT G. Chilesotti · Two-time RoboCup Italian national finalist

Certification: AWS Certified Solutions Architect – Associate (in progress)

Languages: English (professional working proficiency), Italian (native)
